### NEW ABSTRACT

A method performs processing of biometric information to create multiple templates. This allows biometric systems to be flexible and interact with a plurality of vendor's technologies. Specifically, a biometric sample (101) is captured from a sensor (100) and transmitted to a processing component (107). The biometric sample is then processed by a first algorithm to yield a biometric template (108) and the template (108) is stored and associated with a record identifier. The biometric sample is also processed by a second algorithm to yield a second template (112). The second template (112) is stored and associated with the record identifier.
